

Service recovery plan

Northstar Infrastructure Services Limited

Plan ownership and period

Reference NSI-BCP-2026-03. Issued 1 September 2026. Review due 1 September 2027. Priya Adeyemi, Recovery Lead, owns this fictional plan. Contact recovery@northstar.demo.invalid.

Recovery scope

Restore the sample reporting service and its configuration from the isolated backup environment. The service owner must confirm data completeness before reopening access. The archive service is outside the completed exercise scope.

Recovery sequence

The incident coordinator confirms the affected service and authorizes the recovery window. Operations restores the service, checks the recovered data against the source totals, and records the start and finish times. The bank service owner reviews the results before returning the service to use.

Latest exercise

On 20 August 2026 the reporting service was restored in 96 minutes against a 120-minute target. The exercise used fictional test data. The earlier exercise took 145 minutes; the revised restore sequence removed the delay in loading configuration.

Outstanding action

Priya Adeyemi must provide an archive-service restore record by 30 September 2026. Completion of the reporting exercise does not establish recovery readiness for the archive service.

No signature or independent certification is represented by this sample.
